PROFESSIONAL SUMMARY

Computer Science undergraduate (AI/ML) with hands-on experience building and shipping end-to-end AI products from identifying user problems to designing, building, and iterating on solutions. Combines technical fluency in Python, LLMs, and applied Machine Learning with product thinking developed through independent builds and a Product R&D internship, where user research and competitive analysis were translated into feature decisions.

SKILLS

AI/ML and Data: Machine Learning, Deep Learning, Natural Language Processing (NLP), PyTorch, LLMs, AI Agents, Conversational AI, Retrieval-Augmented Generation (RAG), LangChain, LangGraph

Programming Languages: Python, C++, SQL

Developer Tools: Jupyter, GitHub, VS Code, n8n

Product and Design: Figma, Canva, Excel

Core Strengths: Analytical Thinking, Problem Solving, Stakeholder Communication, Ownership and Bias for Action, Adaptability, Attention to Detail

INTERNSHIP

Product R&D Intern - Cups Innovative Educations Pvt. Ltd.

June 2026 - August 2026

- Ran user surveys for an ed-tech platform and translated the feedback into product improvement suggestions aimed at increasing user engagement.
- Benchmarked the platform's content, design, and assessments against competitor products, surfacing 3+ concrete improvement areas for the team.

PROJECTS

AI-Powered Customer Support Agent - RAG-Based Support Assistant

August 2026 - September 2026

Tools/Technologies: Python, FastAPI, Streamlit, ChromaDB, Ollama, Sentence-Transformers, Whisper, LangGraph

- Built a RAG-based support agent that answers queries from a knowledge base with source citations.
- Designed a LangGraph workflow to route queries and create validated support tickets.
- Developed a FastAPI backend and Streamlit chat UI with voice interaction.

Multi-Agent Research System - Automated AI Research Pipeline

April 2026 - May 2026

Tools/Technologies: Python, LangChain, Streamlit, Ollama, Developed an interactive dashboard for reports, source results, and evaluation API, BeautifulSoup

- Built a multi-agent LLM system for automated web research and report generation.
- Designed Search, Reader, Writer, and Critic agents for structured information processing.
- Developed an interactive dashboard for reports, source results, and evaluation.

Non-Invasive Anemia Detection Using Deep Learning

November 2025 - December 2025

Tools/Technologies: Python, TensorFlow, Keras

- Built a deep learning model using ocular images for anemia detection.
- Applied transfer learning (VGG16, DenseNet121, InceptionV3) to improve performance.
- Achieved 84% accuracy and improved recall using ensemble techniques.

ACADEMIC ACHIEVEMENTS

- Runner-up, Ops Tree Hackathon - led ideation and product framing under time constraints.
- Top 50 of 2,400+ teams, Smart India Hackathon (SIH) - national-scale product/problem-solving competition.
- Academic scholarship, first year B.Tech.

EDUCATION

Bachelor of Technology (B.Tech), Computer Science Engineering (AI/ML)

August 2023 - Present

Sharda University, Greater Noida, India | CGPA: 8.6
